Manage Costs
Offers a proactive option to control all the resources consumed.

Governance Toolkit for accelerated Journey
Eviden Governance as a Service combines structuring, management, development, authority and cost tracking of your SAP Business Technology Platform.

Key Features

Overview of running applications bundled by scenario

This feature provides a comprehensive overview of all running applications, neatly categorized by scenario, enabling efficient tracking and management of resources. It simplifies the complexity of operations by offering a clear, organized view of application deployment and usage.

Approval workflow

The approval workflow is a systematic and controlled process that ensures all new applications are thoroughly vetted by the governance team before deployment. This feature maintains the integrity and compliance of the system, preventing unauthorized or potentially harmful changes and ensures reusability of implemented assets.

Forecast of consumption data

With the consumption forecast feature, you can anticipate future resource needs through predictive analysis. This tool aids in budgeting and planning by providing foresight into potential consumption trends and requirements, ensuring that resources are allocated efficiently.

Benefits

Facilitating Lifecycle Management

It provides a comprehensive governance framework that facilitates lifecycle management on the SAP Business Technology Platform (BTP), offering savings in the cloud by providing an overview of apps and resources with responsible leads, promoting controlled innovation with existing development guidelines, and enabling efficient reuse of services.

Structure Management and Cost Tracking

The service offers structured management, development authority, and cost tracking for SAP BTP, which streamlines governance and accelerates digital transformation. It includes features like a centralized registration of all developments and configurations, an approval workflow for validating onboarded apps, and a dashboard for analyzing costs.

Enhance Usage Analytics and Budget Management

Advanced analytics tools within the service provide detailed insights into cost drivers for each scenario, supporting better budget management and cost-saving strategies. Additionally, an alerting mechanism notifies stakeholders when predefined budgets are nearing or have been exceeded, ensuring proactive financial control.
