

DataProtect

Take back control of your data with sovereign end-to-end encryption.

DataProtect a 100% sovereign solution that offers an unparalleled level of security, without compromising on scalability and operational flexibility.

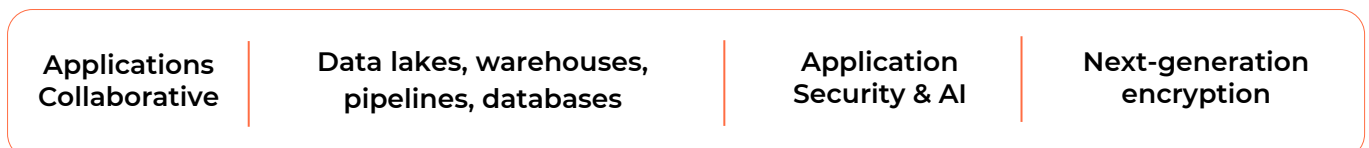

DataProtect solution combines two very high-level security bricks: on the one hand, the **Trustway Proteccio™ HSM**, the only solution on the market to benefit from the **enhanced qualification of the ANSSI**, guaranteeing a maximum level of protection for cryptographic keys in the most sensitive environments; on the other, a **high-performance and crypto-agile KMS**, designed to offer fine-grained control of encryption keys, with cloud-native, hybrid or on-premise compatibility.

Technical & operational benefits:

- | | |
|---|---|
| 
Seamless integration
No need to inject cryptographic libraries into users' applications. | 
Improved reliability
KMS developed in Rust, 70% fewer bugs and increased robustness. |
| 
Unified management
Easily manage multiple identity operators. | 
High scalability
Automatically scales to the encryption load. |
| 
Increased key security
The keys remain in the KMS, eliminating the risk of loss. | 
Superior interoperability
Compatible with standards (KMIP 2.1, PKCS11), OS and containers. |
